```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes therapeutic applications of mature FLINT (mFLINT) for use in the treatment of acute liver failure. Mature FLINT (mFLINT), which is a member of the tumour necrosis factor receptor superfamily, is used for treating acute liver failure, inflammation of the liver, abnormal hepatocyte apoptosis, sepsis, a disorder associated with inflammation, hepatitis, abnormal apoptosis, an ischaemia-associated injury or disorder such as hypercoagulation (including use with trombolytic or anti-thrombolytic agents), reperfusion-associated injury or disorder. Type I diabetes, cancer, cell damage or damage to an innocent bystander tissue that is induced by a chemotherapeutic agent or therapeutic irradiation, treating haematopoietic progenitor cells that thave been exposed to therapeutic radiation or chemotherapy, aplastic anaemia, myelodysplastic syndrome or a pancytopenic condition. mFLINT is also used for promoting the growth or differentiation of a haematopoietic progenitor cell or CD34+ cell and preventing damage to a cardiac mycoyte resulting from abnormal myocardial ischaemia. The present sequence encodes a mature human FAS Ligand Inhibitory protein (FILNT): FLINT is a homologue of tumour necrosis factor receptor proteins. FLINT inhibits the binding of FAS to FAS ligand. The mature FLINT protein is modified to produce analogues, which have greater

                                                                                                                     inhibitory protein FLINT mature protein (see AAB19705). FLINT is a tumour necrosis factor receptor homologue that binds FAS ligand, the reventing its interaction with FAS. This interaction is implicated in runaway apoptosis and inflammatory disease. FLINT also binds to LIGHT, a membrane-bound ligand, which may play a role in immune modulation and apoptosis. The invention relates to novel FLINT analogues (see also AAB19706-09) that are resistant to proteolysis by trypsin-like proteases between positions 218 and 219 of the FLINT mature protein sequence. Nucleic acids, vectors and transformed host cells for recombinant production of the analogues are claimed. FLINT cDNA is used as a template for introducing the registrant FIINT analogues are used to prevent or treat acute lung injury, acute respiratory stress syndrome, ulcerative colitis, chronic obstructive pulmonary disease, pulmonary fibrosis, to inhibit T lymphocyte activation, and to facilitate organ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         21-JUN-1999;

Human FLINT (also known as osteoprotegrin 3) is a new tumour necrosis factor receptor (TNPR) superfamily member, which binds Fasl and LIGHT and prevents Fasl-Fas interaction. Mature FLINT (WFLINT) inhibits Fasl-Fas mediated apoptotic and pro-inflammatory activity. WFLINT is useful for treating acute respiratory distress syndrome, treating or inhibiting inchming ischemic injury during organ transplantation or for organ preservation during transplantation. MFLINT can also be used to treat acute liver failure, inflammation of the liver, abnormal (hepatocyte) apoptosis, sepsis, disorders associated with inflammation, hepatitis, ischemia, hypercoagulation or reperfusion, damage to a cardiac myocyte resulting from abnormal myocardial ischemia, Type I diabetes, cancer, damage to an innocent bystander tissue induced by a chemocherapeutic or therapeutic irradiation, aplastic anaemias, myelodysplastic syndromes and pancytopenic conditions.

(FINT) CDNA. FLINT, a homologue of tumour necrosis factor receptor crocking conversion (TNPR), binds fas ligand (FASE) and thereby preventing the interaction of FasE with fas. FLINT comprising O-linked or N-linked CC oligosaccharides is useful for preventing or treating acute lung injury (ALI), acute respiratory distress syndrome (ARDS), ulcerative colitis, chronic obstructive pulmonary disease (POP) and pulmonary fibrosis (PP), CC chronic obstructive pulmonary disease (ARDS), ulcerative colitis, chronic obstructive pulmonary disease (ARDS), ulcerative colitis, to facilitate organ preservation for transplantation and to inhibit T CC lymphocyte activation. FLINT is useful for treating and/or preventing diseases such as rheumatoid arthritis, fibroproliferative lung disease, fibrotic lung disease, acute lung injury, human immunodeficiency virus (HIV), ischaemia, brain trauma/injury, chronic renal failure, graft-vs-host disease, cutaneous inflammation, vascular leak syndrome, Helicobacter pylori infection, goitre, atherosclerosis, insulin dependent diabetes mellitus (IDDM), osteoporosis, inflammatory bowel disease, crohn's disease, sepsis, pancreatitis, cancer, autoimmune disease such as poriasis, Down's syndrome, and multiple sclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New FLINT polypeptide for treating and/or preventing acute lung injury, acute respiratory distress syndrome, ulcerative colitis, and graft-versus-host disease, comprises O-linked or N-linked oligosaccharides -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a new method of administering FLINT (FAS ligand inhibitory protein) or FLINT analog that involves pulmonary administration of a therapeutic amount of the FLINT or FLINT analog. The method enables systemic absorption of FLINT through lungs and significantly reduces or eliminates the need for administering FLINT by injection or other routes of administration. The method is useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Administering FLINT (FAS ligand inhibitory protein) or FLINT analog, useful for treating e.g. sepsis or respiratory distress syndrome, involves pulmonary administration of a therapeutic amount of the FLINT or FLINT analog -

treating disorders related to enhanced apoptosis (e.g. organ failure in liver, kidneys and pancreas) and inflammatory diseases associated with neutrophil activation (e.g. sepsis, acute respiratory distress syndrome, acute lung injury, systemic inflammatory response syndrome (SIRS) and multiple organ dysfunction (MODS)). The method minimises the pain and discomfort of injection methods. The present sequence is human

CC (mFLINT) for use in the treatment of acute liver failure. Mature FLINT (mFLINT), which is a member of the tumour necrosis factor receptor CC superfamily, is used for treating acute liver failure, inflammation of CC with inflammation, hepaticis, abnormal apoptosis, a disorder associated CC with inflammation, hepatitis, abnormal apoptosis, an ischaemia associated CC injury or disorder such as hypercoagulation (including use with CC thrombolytic or anti-thrombolytic agente), reperfusion associated injury CC or disorder, Type I diabetes, cancer, cell damage or damage to an CC innocent bystander tissue that is induced by a chemotherapeutic agent or CC therapeutic irradiation, treating haematopoietic progenitor cells that CC anaemia, myelodysplastic syndrome or a pancytopenic condition. mplint is CC also used for promoting the growth or differentiation of a haematopoietic cresulting from abnormal myocardial ischaemia. The present sequence CC encodes human FLINT.

inhibitor (FLINT). The FLINT protein is involved in cell-specific
conditions are used to treat inflammatory and autoimmune diseases
such as rheumatoid arthritis, inflammatory bowel disease,
the crown state of disease, diabetes, psoriasis and Graves' disease,
confections diseases such as HIV-induced lymphopenia, fulminant viral
thepatitis B/C, chronic hepatitis and cirrhosis, and H. pylori-associated
conferation, ischaemia and reperfusion conditions including acute
conferation, ischaemia and reperfusion conditions including acute
and atherosclerosis, and Alzheimer's and parkinson's disease, brain
trauma and injury, chronic glomerulonephritis, osteoporosis, aplastic
anaemia, myelodysplasia, ulcerative colitis, Down's syndrome, and
multiple sclerosis. In addition, the gene and protein can be used to
prevent apoptosis following organ transplantation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human FLINT (also known as osteoprotegrin 3) is a new tumour necrosis

factor receptor (TWFR) superfamily member, which binds Fast and LIGHT and

prevente Fast-Fas interaction. Mature FLINT (mFLINT) inhibits Fast-Fas

mediated apoptotic and pro-inflammatory activity. mFLINT is useful for

treating acute respiratory distress syndrome, treating or inhibiting

culcerative collitis, inhibiting ischemic injury during organ inhibiting

transplantation or for organ preservation during transplantation. mFLINT

can also be used to treat acute liver failure, inflammation of the liver,

abnormal (hepatocyte) apoptosis, sepsis, disorders associated with

inflammation, hepatitis, ischemia, hypercoagulation or reperfusion,

damage to a cardiac mycoyte resulting from abnormal mycoardial ischaemia,

Type I diabetes, cancer, damage to an innocent bystander tissue induced

by a chemotherapeutic or therapeutic irradiation, aplastic anaemias,

myelodysplastic syndromes and pancytopenic conditions.

                        This DNA encodes a HUMAN NTR-1 polypeptide, a novel orphan receptor. The protein is related to osteoprotegerin (OPG) and to tumour necrosis factor receptor (TNFR). Host cells transformed with a vector comprising the HUMAN NTR-1 nucleic acid are used for the recombinant expression of the protein. HUMAN NTR-1 proteins and antibodies immuno specific for the protein are useful for diagnosis and treatment of humans and animals, especially muscle disorders, as the receptor is involved in regulation of bone mass and muscle metabolism. HUMAN NTR-1 receptors are also useful for screening for novel binding agents, and cognate ligands, which may be used to treat disorders associated with HUMAN NTR-1 imbalance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    HUMAN NTR-1; orphan receptor; osteoprotegerin; OPG; TNFR; human; tumour necrosis factor receptor; muscle disorder; bone mass; scr muscle metabolism; binding agent; cognate ligand; ss.

The present sequence encodes the tumour necrosis factor (TNF) receptor polypeptide NTR3. The NTR3 polynucleotides and polypeptides are useful for treating diseases such as acquired-immunodeficiency syndrome (AIDS), anemia, autoimmune diseases, cachexia, cancer, cerebral malaria, disbeties mellitus, disseminated intravascular coagulopathy, erythroid sick syndrome, haemorrhagic shock, hepatitis, insulin resistance, leprosy, leukaemia, meningitis, multiple sclerosis, myocardial ischaemia, obesity, rejection of transplanted organs, rheumatoid arthritis, septic shock syndrome, stroke, adult respiratory distress syndrome (ARDS), tuberculosis, and a number of viral diseases. The NTR3 polypeptide is useful for identifying or developing new (ant) agonists of NTR3. It may be useful as mimunogen to which antibodies may be raised. NTR3 uncleic acid molecules may be useful as hybridisation probes in diagnostic assays to test, either qualitatively or quantitatively, for the presence of an NTR3. DNA or corresponding RNA in mammalian tissue or bodily fluid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New tumor necrosis factor receptor, NTR3, useful for treating cancers, stroke, anemia, obesity, rheumatoid arthritis and transplantation rejection -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
